

Dear Employees, Clients, Partners, and Suppliers:

Ontario has now entered Stage 3 of the reopening of the province. The continuation of “*All construction activities or projects and related services that support construction activities or projects, including demolition services resume and essential workplace limits lifted.*” As such, we are pleased to say that all and any of our projects are well on their way, as most were already in stage 2. GeoSolv continues to be committed to adhering to, as outlined by the government of Ontario. A list of these specific guidelines for the construction sector can be [found here](#).

Nearly all businesses and public spaces will be able to gradually reopen in Stage 3, with public health and workplace safety restrictions in place, while some high-risk venues and activities will remain closed until they can safely resume operations. Based on the advice of the Chief Medical Officer of Health and other health experts, indoor and outdoor gathering limits will also be increased. Physical distancing remains a requirement for all people who are not from the same household or social circle, this includes workers on all construction sites.

Ontario has made tremendous progress in the ongoing fight against COVID-19, thanks to the sacrifice and hard work of frontline heroes and volunteers, and the personal responsibility shown by the people of the province. Stage 3 does not mean that the fight against this deadly virus is over — far from it. Everyone must continue to be vigilant and follow public health advice and workplace safety guidelines. This will help limit outbreaks and reduce the risk of undoing the significant progress we have made together over the past several months.

The Ontario governments recommendations include:

- Clean your hands often. Use soap and water, or an alcohol-based hand rub.
- Maintain a safe distance from anyone who is coughing or sneezing.
- Wear a mask when physical distancing is not possible.
- Don't touch your eyes, nose or mouth.
- Cover your nose and mouth with your bent elbow or a tissue when you cough or sneeze.
- Stay home if you feel unwell.
- If you have a fever, cough and difficulty breathing, seek medical attention.

Calling in advance allows your healthcare provider to quickly direct you to the right health facility. This protects you and prevents the spread of viruses and other infections.

- Masks can help prevent the spread of the virus from the person wearing the mask to others. Masks alone do not protect against COVID-19 and should be combined with physical distancing and hand hygiene. Follow the advice provided by your local health authority
